

SentinelLog AI — Executive SRE Incident Audit Report

Generated At: 2026-08-24 07:08:51 UTC **System Status:** Operational **AI & ML Architecture:** Isolation Forest (300 Trees) + Google Gemini 1.5 SRE Explainer

1. EXECUTIVE SUMMARY & FLEET METRICS

Total Logs Ingested & Analyzed: 9,951 records

High-Risk Anomalies Flagged (Score ≥ 0.7): 746 (7.5% incident rate)

Model Evaluation Benchmark: $F_1 = 0.9758$ | $\text{ROC-AUC} = 0.9970$ | $\text{Precision} = 97.06\%$ | $\text{Recall} = 98.11\%$

2. TOP HIGH-SEVERITY INCIDENTS & ROOT CAUSE DIAGNOSES

Incident #1: GET 503 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:14 | **Session ID:** #7712 | **User Agent:** Scrappy

Isolation Forest Anomaly Score: 1.00 / 1.0

Algorithmic Reason: High-velocity request burst (114 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | System service outage / 5xx error cascade (503) | Automated tool signature (Scrappy)

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #2: GET 503 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:14 | **Session ID:** #7712 | **User Agent:** Scrappy

Isolation Forest Anomaly Score: 1.00 / 1.0

Algorithmic Reason: High-velocity request burst (114 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | System service outage / 5xx error cascade (503) | Automated tool signature (Scrappy)

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #3: GET 503 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:15 | **Session ID:** #7712 | **User Agent:** Scrappy

Isolation Forest Anomaly Score: 1.00 / 1.0

Algorithmic Reason: High-velocity request burst (118 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | System service outage / 5xx error cascade (503) | Automated tool signature (Scrappy)

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #4: GET 503 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:15 | **Session ID:** #7712 | **User Agent:** Scrapy

Isolation Forest Anomaly Score: 1.00 / 1.0

Algorithmic Reason: High-velocity request burst (118 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | System service outage / 5xx error cascade (503) | Automated tool signature (Scrapy)

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #5: GET 200 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:15 | **Session ID:** #7712 | **User Agent:** Scrapy

Isolation Forest Anomaly Score: 0.99 / 1.0

Algorithmic Reason: High-velocity request burst (115 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | Automated tool signature (Scrapy)

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #6: GET 200 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:15 | **Session ID:** #7712 | **User Agent:** Scrapy

Isolation Forest Anomaly Score: 0.99 / 1.0

Algorithmic Reason: *High-velocity request burst (115 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | Automated tool signature (Scrapy)*

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #7: GET 200 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:17 | **Session ID:** #7712 | **User Agent:** Scrapy

Isolation Forest Anomaly Score: 0.99 / 1.0

Algorithmic Reason: *High-velocity request burst (120 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | Automated tool signature (Scrapy)*

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #8: GET 200 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:17 | **Session ID:** #7712 | **User Agent:** Scrapy

Isolation Forest Anomaly Score: 0.99 / 1.0

Algorithmic Reason: *High-velocity request burst (120 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | Automated tool signature (Scrapy)*

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #9: GET 429 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:15 | **Session ID:** #7712 | **User Agent:** Scrappy

Isolation Forest Anomaly Score: 0.99 / 1.0

Algorithmic Reason: *High-velocity request burst (116 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | Automated tool signature (Scrappy)*

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

Incident #10: GET 429 from 185.220.101.5 (China)

Timestamp: 2023-01-01 12:37:15 | **Session ID:** #7712 | **User Agent:** Scrappy

Isolation Forest Anomaly Score: 0.99 / 1.0

Algorithmic Reason: *High-velocity request burst (116 reqs/2m) | Rate-limit violation (HTTP 429 Too Many Requests) | Repeated authentication failure (401/403 brute force) | Automated tool signature (Scrappy)*

AI Summary: Automated high-velocity anomaly signature.

Probable Root Cause: Security probe or microservice resource exhaustion.

Remediation Playbook:

- Invalidate active session and inspect traffic telemetry.
-

3. RECOMMENDED FLEET-WIDE SRE HARDENING ACTIONS

1. **WAF Layer-7 Rate Limiting:** Enforce dynamic rate-limiting on high-velocity client IPs. 2. **Session Fingerprint Binding:** Invalidate tokens that exhibit geographic location hops within impossible temporal windows. 3. **Database Connection Pool Circuit Breaking:** Enable circuit breakers on failing downstream services to mitigate cascading 500 errors.
